

DATE :13/09/2024

Candidate : Karthikeyan T

Client : Satheesh

Self Introduction:

Explained Previous Project Technical Architecture .

Backend:

Jwt Authentication:

- Jwt Token Generation.
- Refresh Token.
- How to pass a token to an Angular application.

OAuth :

Dependency Injection.

- How to Configure DI in .Net
- Core. IOC containers.
- Third Party IOC Container
[List of .NET Dependency Injection Containers \(IOC\) - Scott Hanselman's Blog](#)
- @Scope vs @Transient vs @Singleton. When to use what ?
- Unit of Work & Repository pattern

SOLID principles:

Class open for extension, how will you implement this in the class (dynamic polymorphism)?

Ensure that the class is closed for modification.

Singleton pattern.

CORS concept.

Unit of Work and Repository Patterns:

ORM : Entity Framework:

LINQ and Joins:

How do you perform a left outer join using LINQ in .NET?

What is the difference between IQueryable and IEnumerable?

Angular

- Purpose of Interceptor?

- How many Interceptors are used in your project?
- Where do you store the token in Angular: local storage and session storage?
- How do you manage data communication between Angular components?
- How do you use Angular services?

AWS :

- Message service

Additional Notes:

- The interviewer validates whether the above concepts are used in your previous project or not.
- The interviewer expects a clear explanation of the previous project Technical Architecture.

DATE: 30/7/2024

Candidate: Simon

Client: Satheesh

Convert the server to a serverless service. Existing product.

Parallel

C#: Strong OOP principles, common design patterns, SOLID principles, learner in AWS is okay. Pure full-stack developer.

Self-Introduction: Limited time.

Client:

- Large team of 35 members with 15+ years of experience.
- Development, low-level design, and all opportunities.

Questions:

1. How long have you been working as a full-stack developer?
2. Angular:
 - Specific contributions to Angular.
 - Expecting more on Angular components like complete features.
 - What sort of authentication and authorization do you use?
 - Where do you store the token in Angular: local storage and session storage?
 - Token lifespan, OAuth (access token vs. refresh token).
 - What if there is no refresh token (e.g., async job)?

- Each API needs to attach the token. How do you handle this?
- Centralized/global way to attach the token (e.g., middleware, interceptor in Angular).

Backend:

- Loosely coupled (design concept, API Gateway).
- Singleton pattern.
- .NET Framework: Managing object dependencies, how to achieve that in .NET Framework, IOC containers.
- .NET Core:

Data access technology (use Entity Framework, Code First).

@Scope vs @Transient vs @Singleton. When to use what ?

Unit of Work & Repository pattern

Transaction commit/rollback.

SOLID principles: Class open for extension, how will you implement this in the class (dynamic polymorphism)?

Ensure that the class is closed for modification.

CORS concept.

Additional Notes:

- Angular is hosted separately from the API (different URLs).
- LINQ query, left outer join query, IQueryable and IEnumerable.

Experience:

- Extensive experience in Angular is required.
- 35 developers and a focus on growth.
- 100% coding role. Quick response needed.
-

Batch 1: Time- 11:30AM

Candidate: Ashraf

Client: Satheesh

Questions:

User Onboarding and Authentication:

Can you explain the process of user onboarding in a full-stack application?

How do you implement authentication using JWT tokens in .NET?

Design Patterns:

What design patterns are commonly used in backend development with .NET?

Can you give an example of how you've applied a design pattern in your projects?

Dependency Injection:

What is dependency injection, and why is it important in .NET development?

How do you implement dependency injection in .NET applications?

JWT and Token-Based Authentication:

What is the difference between a JWT and a traditional token-based authentication system?

How does the refresh token differ from the access token? Are we getting both tokens at the same time from back end or is it we get access token first and then refresh token.

What happens after a user logs in, and how does the server handle the token?

Token Management in Frontend (Angular):

How should tokens be managed on the frontend in Angular applications?

What are the best practices for securing tokens in an Angular application?

How do interceptors work in Angular, and how can they be used for managing tokens?

Angular Observables:

What is an Observable in Angular, and how is it different from a Promise?

Can you provide an example of using Observables in Angular?

Transient, Scoped Dependencies and Singleton:

What are @Transient and scoped dependencies in .NET?

How do they differ, and when would you use each?

Unit of Work and Repository Patterns:

What is the Unit of Work pattern, and how does it help in managing database transactions?

How does the Repository pattern work, and how is it used in conjunction with the Unit of Work pattern?

Abstract Methods vs. Virtual Methods:

What is the difference between abstract methods and virtual methods?

How do abstract classes and virtual methods fit into object-oriented design?

Base Class vs. Child Class:

How does a base class differ from a child class in terms of access modifiers and inheritance?

What is the role of private members in inheritance?

What is the use of base key word in inheritance?

LINQ and Joins:

How do you perform a left outer join using LINQ in .NET?

What is the difference between IQueryable and IEnumerable?

Batch 2: Time- 11AM

Candidate: Manaswini

Client: Karthikkumar Subramanian (Lead Engineer)

Questions:

Current Project Architecture and Roles and Responsibilities:

- What are the roles and responsibilities within your current project architecture?

Database:

- What is isolation in SQL?
- How do you handle performance in SQL?

Backend:

- What authentication methods do you use in your API?
- Which design patterns have you used?
- What design principles do you apply in your project?
- Do you use microservice patterns?
- How have you implemented the Singleton and Repository design patterns?
- How do you implement ORM in your project?
- How do you update your database in case of any structural changes?
- How do you handle error management?

Front End:

- How do you restrict users from viewing certain pages that require admin access in Angular?
- How do you manage data communication between Angular components?
- How do you use Angular services?

Career Aspirations:

- Where do you see yourself in 2 years?

Additional Notes:

- The interviewer will ask questions based on your explanations.
- How much do you rate yourself (Specific Language/Tool) Example: Angular.

Batch 2: Time- 11.30AM

Candidate: Sumathi

Client: Karthikkumar Subramanian (Lead Engineer)

Questions:**Frontend:**

- How do you handle microservices in the backend?
- Have you implemented SOLID principles? Explain in detail.
- How do you implement the backend data layer in .NET?
- Have you implemented any design patterns? Why do we need to follow the CQRS pattern?
- Why did you implement Microsoft ViewJS in your current organization?
- What services do you use in the backend?
- Why do you use dependency injectors?

Backend/Database:

- Why do you use temp tables in SQL?
- How do you combine and query other data sources?
- How do you migrate data in the production environment for a particular record?
- How do you migrate a database from Neo4J to SQL?
- Why did you select Neo4J?

Additional Notes:

- The interviewer will ask questions based on your explanations.
- How much do you rate yourself (Specific Language/Tool) Example: Angular.

Date: 16-08-2024

Candidate Name: Agilan.K

Interviewer: Karthik

Questions:

1. **Introduction:** Tell me about yourself.
2. Explain about your current project, roles & responsibilities
3. Explain about current project architecture and explained the used design patterns
4. Explain about SOLID principles, why we need it.
5. Explain about the Design patterns, which you used.

Back end:

1. Microservices and patterns
2. Explain about the error handling?
3. Explain the singleton pattern?

Front end:

1. How do you handle the Authentication, Authorization in your application?
2. Explain the angular components?

Database:

1. What is Isolation in a database?
2. Cluster index vs Nonclustered index?
3. Why did you use the Neo4J?
4. Why do you use PostgreSQL?

Cloud Technologies:

1. Explain about the API gateway?
2. How many services are used in cloud technologies, explain in detail?

Date: 23-08-2024

Candidate Name: Prakash

Interviewer: Satheesh

Questions:

- 1.Introduce yourself
- 2.Project Explanation
- 3.Architecture of the project
- 4.What is the Singleton pattern? How to create a singleton pattern?

5.Static class ?

6. What is the use of SOLId Principle?

7. Explain OCP principles and how to use your project and provide some examples ?

6. Asynchronous programming : We have Method A, Method B and Method C, Method B depends on Method A result and Method C depends on Method B result. How does it work ?

SQL :

- 1.Isolation level and how do you manage your query ?
- 2.Disadvantage of clustered index.
- 3.Clustered index and Non Clustered index.
- 4.How will Clustered index and Non Clustered index work?

Angular :

1. We have a dashboard, admin can access all the details , but users can view only particular details. How to set an angular page?
2. How to send data between two components ?
3. Authentication ?
4. Interceptor ?
- 5.Any cloud service you have worked on ?

Date: Aug 2024

Candidate: Kirubha C V N

Client: Satheesh

- Self Introduction (explanation required on Technical Background)
- Roles and responsibilities in the recent Project

Technical Questions:

Frontend:

1. How do you handle authentication in your application?
2. How do you handle authentication at the component level in Angular?
3. How do you handle a token in an interceptor?
4. Constructor in Angular
5. Where and How do you store authentication data in an application?

Backend:

1. Dependency injection (Singleton, transient, Scoped)
2. Linq (joins, IEnumerable, IQueryable)
3. Explain Singleton
4. Extension Methods
5. Entity Framework
6. Error handling
7. Middleware in .net core

SQL

1. Indexes
2. How do you handle performance issues
3. How do you update any column based on the same column data itself
4. Isolation in Database
5. Temp table in SQL

Date: 06-09-2024

Candidate Name: Vaishali Bhalerao

Interviewer: Satheesh

- Satheesh explained job requirements and technologies used in application in Likewise.
- Self Introduction
- Roles and responsibilities in the recent Project
- Technologies used in recent project

Technical Questions:**AWS**

Explain basic features of AWS.

Frontend:

1. Explain about authentication and authorization?
2. How to handle access token expiration without breaking current ongoing operation with the user.
3. How will you use the access token-Where will you store it.
4. How HTTP Request will know about HTTP Interceptor.

Backend:

1. What is the "base" keyword? What is the use of it in classes and inheritance?
2. What is the role of the "base" keyword?
3. How does the repository pattern work?

4. Explain Unit of Work.
5. Suppose three repository classes are created and need to insert data at the same time. How will you handle this?
6. In the Unit of Work, how will you understand that operation is completed?
7. Entity Framework.

Date: 10 Sep 2024

Candidate: Sumathi B

Client: Satheesh

Backend:

1. More detail about microservices. Like how it's working and the process of execution.
2. How are middleware components in .net core executing? After returning the response will it execute again?
3. Explain Async and Await process and more detail about it and compare it with thread execution with example scenario.
4. Where did you deploy your microservices?
5. How many microservices were used in your project? How is it implemented?
6. .Net core service implementation
7. .Net core start to end execution process

Frontend:

1. Explain your angular project?
2. Back to back questions from that project?
3. When the next button is clicked have you stored the data in DB?
4. If the user has closed the browser and when reopened how will you show the same page where he left?
5. Observable and how promise differ from observable
6. Localstorage and sessionstorage
7. Subject and Behavior subject

Date: 06-09-2024

Candidate Name: Prabakaran Annamalai

Interviewer: Satheesh

- Satheesh explained job requirements and technologies used in application in Likewise.
- Self Introduction
- Technologies used in recent project

Technical Questions:

Explain Azure, What you know about in azure?
What is OAuth token in API?
Diff between WCF and Web API?
What is WSDL?
What is Fluent API in ORM?
What is dependency injection?
What DI(dependency injection) container is used in your project?
What is startup.cs file in .netcore?
What is middleware in .netcore?
What are the ways to handle the errors in MVC application?
What is one to one and many-to-many relationship in sql? Give one example.

Date: 27-09-2024

Candidate Name: Vijayakumar Ramakrishnan

Interviewer: Satheesh

- Self Introduction
- Technologies used in recent project

Technical Questions:

1. Handling security in an application, such as session expiration and refresh token?
2. What is Jwt and OAuth token in API?
3. What is dependency injection?
4. What DI container is used in your project?
5. What is startup.cs file in .netcore?
6. What is middleware in .netcore?
7. What is Fluent Api in ORM?
8. How to pass data from an Action to a view in MVC?
9. How to create services for background jobs?
10. Microservices architecture?
11. What is record type in c#?
12. How tokens are handled in Angular applications?

Date: 04-10-2024

Candidate Name: Chandru Padmakumar

Interviewer: Satheesh

- Satheesh explained job requirements and technologies used in application in Likewise.
- Self Introduction
- Technologies used in recent project

Technical Questions:

1. What is Access, Refresh Token, How it Handles in application
2. Purpose and Usage of refresh token and access Token
3. Possibilities of maintaining token in client and most secured way
4. Scenarios to handle Singleton, Transient and Scoped DI - After presenting a scenario, ask which type applies and why, as well as the reasons the others do not
5. Many to many Relationship table design and How it will handle in Entity Framework
6. Able to call stored procedure from Entity Framework

Date: 03-01-2025 & 07-01-2025

Candidate Name: Sarath Kumar P K

Interviewer: Satheesh

Technical Questions: (Virtual)

1. Started with the tech stack experience and the recent project work flow and architecture design.
2. How to Configure DI in .Net Core.
 - a. Which lifetime is suitable for DataSource service?
3. What are the other types of IOC containers?
4. Authentication and authorization using JWT and OAuth (Single sign on)
5. Design patterns - Repository and unit of work.
6. What is ORM and different types of ORM?
7. What is Fluent API?
8. Left outer join using LINQ query
9. How to run the stored procedure command using EF.
10. Interceptor and middleware concepts
11. Localstorage and sessionstorage difference
12. Different ways to pass the data in MVC
13. CORS concept

Face-to-Face:

1. Singleton pattern

- a. What if we make the constructor as private and how will you create an object of that class
2. SOLID principles
 - a. Open closed principles
 - b. How to restrict the class closed for modification and extension (using sealed class).
3. Explain Async and Await process and more detail about it then the thread pooling and handling flow.
4. Explain about APIGateway in AWS
5. WCF, WSDL and SOAP vs RESTAPI
6. Which is best to use, compared with Form based authentication and JWT as an authentication service for both web and mobile applications
7. Cloud services (Microservices) in AWS

Additional Notes:

1. Client expecting more hands-on experience in cloud side (AWS).
2. The interviewer expects a clear explanation of the topics which you discussed.

Date: 23-01-2025

Candidate Name: Lakshmana Kumar S

Interviewer: Satheesh

Technical Questions:

Face-to-Face:

1. Roles and responsibilities
2. "this" and "Base" keyword in c#.
3. What is WSDL?
4. JWT implementation in detail
5. DI in detail with project implementation example
6. Steps to implement Soap service in your application.
7. Scoped vs Transient
8. Fluent in API
9. Solid Principle - Open closed , Liskov substitution principle
10. Interceptor
11. Currently using which angular version?
12. Do you have experience in creating SP and functions?

Date : 27/03/2025

Candidate : Silambarasan Radhakrishnan

Interviewer : Praveen Kumar

Questions:

1. Tell me about yourself
2. Explain about project architecture and Design Pattern used in recent projects
3. API Authentication and Authorization mechanism
4. Entity Framework ORM with Model based and DB based approaches
5. Did you write the SP and Functions in recent projects
6. How to optimize the Production DB(performance issue).
7. How to handle Token in Angular.
8. How to pass the data between parent to child and child parent
9. How to pass the data without relationships(standalone components)
10. Where to register the Services and how use DI in angular
11. How to attach the token(Interceptor) to validate in API
12. Handle the Global level exceptions in Angular
13. Difference between Promises and Observables
14. Subject and BehaviorSubjects
15. How to handle the API response and render in DOM
16. What are the RxJs Operators used
17. How to handle configurations in multiple environments(dev, test, stage) in Angular.
18. How to deploy the angular application (both Manual and Automatic)

Date : 26/03/2025

Candidate : Hammathu Ajmalkhan

Interviewer : Shathish

Questions:

1. Asked about My Recent projects
2. Asked about single signOn providers and he expected awareness of IdentityServer4
3. Discussed about CQRS (just asked what is read db and write db)
4. Why you prefer Local storage for JWT
5. Why not Session storage
6. How will you use local/session storage in angular

7. How you secure API End points if the token stored in local storage of a browser as it can be easily used by others

8. When and how to use abstract methods and virtual method

9. Async Await methods usage,

The given Scenario is when an async method(f1) calls another async method(f2) within that and has further line of code , in this case thread will whether the thread will wait for F2 execution to complete or not

Date : 09/04/2025

Candidate: Madhanraja Vijayaram

Interviewer : Satheesh Balakrishnan

Questions:

1. Introduce yourself
2. Explain about your previous projects
3. Your Roles and Responsibilities
4. Design patterns experience
5. Angular experience and versions
6. Cloud services implementation experiences and expecting AWS exposure
7. What is SSO and which is best for Enterprise applications
8. AWS IAM and Cognito
9. Authentication and Authorization for Mobile applications
10. JWT and how to handle the ideal time
11. Handling different User roles in API
12. Microservice architecture and handling the request and response
13. CQRS pattern
14. Middleware and how the incoming request and response handled in .net framework
15. Different types of Database Authentication
16. ORM and Its types
17. EF
18. IEnumerable and IQueryable
19. Query for select top 3 records using EF
20. Dependency injection and different DI containers
21. Types of DI services with real time examples
22. Unit Test and What is Mock

- 23. Any mock environment experience
- 24. Private Constructor and what is the default access specifier for Private Constructor
- 25. Static object and how it works
- 26. Angular services
- 27. Angular Request and Response handling
- 28. How securely handle the token in front end
- 29. Angular Interceptor and retry the failed requests
- 30. Observables and RxJs mappings

Date: 25-06-2026 & 26-06-2026

Candidate: Harish Unnikrishnan

Interviewers: Arnold Francis(25th) and KarthikKumar (26th)

Questions:

General:

- 1) Previous project architecture , tech stack and explanation.
- 2) Migration project exp - How was the Monolith app sunset planned ?
- 3) Migration project - upgrades, coding standards, breaking changes

C# & .Net:

- 1) Authentication & Authorization using JWT.
- 2) Token storage & Expiration
- 3) Secure Token transmission
- 4) Scopes of service - Singleton, Scoped, Transient
- 5) Async & Await - E2E flow from UI - Service - DB
- 6) Routing
- 7) Abstract class vs Interface
- 8) IEnumerable vs IQueryable
- 9) Var vs Dynamic
- 10) Thread vs Task
- 11) Exception handling
- 12) EF - Code first vs Db first
- 13) Design patterns

Sql:

- 1) Stored Proc and Performance analysis and optimization
- 2) Restrict a column of a table to have only positive values
- 3) Scoped identity
- 4) Deadlock - Versioned row
- 5) Can a view be updated ?
- 6) Table variable vs CTE ? Storage of each of them.
- 7) Exception handling in Stored procs.
- 8) Dataadapter vs Datareader
- 9) ExecuteScalar vs ExecuteNonQuery
- 10) Partitions - Production SQL structure
- 11) Where vs Having
- 12) Joins vs Subqueries
- 13) Database deployment
- 14) Isolation levels
- 15) Replicas - Master/Slave, Primary/Secondary

Angular:

- 1) View Encapsulation - ShadowDom, Emulated, None
- 2) RouterOutlet
- 3) Pass data between components
- 4) Reducer
- 5) State Management
- 6) Behaviour Subject vs Subject
- 7) Input vs Output
- 8) Restrict users from accessing different pages - Guards

Microservices:

- 1) Models used for building microservices.
- 2) Authentication and Authorization as separate modules - Reasons ?
- 3) Database Deployments.
- 4) Number of Microservices used and details.
- 5) Service to Service calls.
- 6) Event driven architecture vs Rest/HTTP
- 7) Authentication & Authorization across multiple microservices in a single httpcall.
- 8) Type of Authorization used - Role based/ Claim based/ Permission based

AWS:

- 1) Services used in AWS.
- 2) Dashboarding using OpenTelemetry, Grafana.

Date: 09-07-26

Candidate: Rajarajan

Interviewers:KarthikKumar

Questions:

General:

1. Current project roles and responsibilities.
2. Current or any close to the heart project flow and architecture.
3. Architecture decision you have made in your project.

C# & .Net:

1. Explain the design patterns used in your project.
2. Explain about EF core migration.

Sql:

1. Isolation levels
2. Replicas - Master/Slave, Primary/Secondary
3. Handling the rollback db script.

Angular:

1. Pass data between components
2. Restrict users from accessing different pages

Microservices and AWS:

1. End to end deployment of microservices.
2. Number of Microservices used in your project and explanation.
3. DB deployment
4. Service to Service calls.
5. Why we need to use event driven architecture and when.
6. Why we need to use CQRS should explain the scenario.
7. Explain any services used in AWS apart from lambda and API Gateway.
8. How to spin up the AWS containers? Excepting it practically in depth.
9. How to scale up the application deployed in AWS?(should be a clear cut practical way)
10. Your legacy application has variable traffic and a high cloud bill. Walk me through your strategic approach to optimizing its costs.
11. If you're listening to an event and the incoming payload comes with more than 10MB data then what will happen and how do you handle it?
12. Exposure to docker and Kubernetes.

13. Where and how the docker image will be deployed.

Expectation:

All the AWS and microservice questions we should be able to answer practically in depth.

Date: 17-07-2026

Candidate: Akilan

Interviewers: Karthik Kumar

Questions:

General:

Can you briefly introduce yourself and describe your current roles and responsibilities?

Microservice:

Can you explain the microservices architecture you implemented in your project?

How have you implemented authentication and authorization in your microservices?

Which identity provider or authentication provider is integrated with your API Management/API Gateway?

How is service-to-service communication handled in your microservices architecture?

C# & .Net:

How do you handle large file payload size in your application?

How do you implement exception handling in your application?

Which design patterns have you implemented in your application?

What is the difference between a Task and a Thread?

Azure:

Which monitoring tools do you use to track application performance, exceptions?

Database:

How do you manage database deployments in the production environment?

What are the different transaction isolation levels in SQL Server?

Design Pattern:

Can you explain the Saga and CQRS patterns? Why did you choose to implement them in your project?

Angular:

How do you restrict access so that only administrators can access the User Access Management (UAM) page while preventing regular users from accessing it?

AWS:

Which AWS services have you used in your application and what was the purpose of each?

Deployment:

How do you build and deploy Docker images to Amazon ECS?

Date: 21-07-2026

Candidate: Akilan

Interviewers: Saranya

Questions:

Explain the design patterns you have implemented in your project.

Why do we use design patterns? What problems do you solve?

Why do you use a Web Application Firewall (WAF)?

How do microservices communicate with each other?

How do you secure your APIs?

How does one service allow other services to provide a response?

How do microservices authenticate and authorize internal service-to-service communication?

What is the difference between Azure Logic Apps and Azure Function Apps?

How do you manage transactions across multiple microservices?

Scenario: Users can browse or purchase products. Design a database schema to capture user activity and recommend advertisements for both new and existing users. How would you query the data to serve relevant advertisements?

Scenario: You have multiple tasks to complete within a tight deadline, and you are allowed to use an AI coding assistant. Which AI coding agent would you choose, and how would you use it to improve productivity while maintaining code quality?

Scenario: You are unable to complete an assigned task within the expected timeline. How would you communicate this to your manager?

Scenario: During a code review, you identify improvements in a teammate's pull request, but they refuse to make the changes. How would you handle the situation? Would you approve the PR?

Scenario: You are assigned to multiple projects, but the priorities are unclear. How would you determine priorities, manage your workload, and communicate with stakeholders?

Date: 23-07-2026

Candidate: Akilan

Interviewers: Mohammed Safi

Questions:

Could you briefly introduce yourself, including your recent work experience and your primary areas of interest?

What motivated you to join Ideas2IT?

Could you explain your most recent project, your responsibilities and the specific hands on work you performed?

Which AWS services have you worked with and why were those services chosen for your project?

Can you describe the AI related tasks you worked on?

Which AI model did you use and why do you choose it?

What have you learned or heard about the interview process at Likewize from previous interviewer?

What do you know about Likewize, its business and the products or services it offers?

Date: 11/08/2026

Candidate: Nishanthini Rosario

Interviewer: Sudhakar

Explain about your project. What is your role on the project?

Explain about your project architecture.

What is API Gateway? How do you authenticate the service?

What services are used in AWS for microservices?

What service is used for deployment in AWS for microservices?

How did you authorize the roles in AWS API Gateway?

What is ALB? And what is the Target group?

How do you authorize the services?

How do your microservices communicate with each other?

In which scenario have you used Synchronize communication?

In which place did you use async communication?

How did you implement RabbitMQ?

The consumer service failed. What will happen?

What is the Saga pattern? How is it implemented?

What is middleware? What are action filters? The difference between?

What is custom middleware? Where have you implemented it in your project?

What is the open-closed principle, and in which cases in your project was it implemented?

What are the design patterns you have implemented (Repository, Unit Of Work)?

In Angular, how do you pass the components from one to another?

How are you dynamically loading the components? Like the Allsec portal, based on the client ID, I want to load the components? How to achieve it?

Date: 13-08-2026

Candidate: Nishanthini

Interviewers: Saranya

Tell about yourself.

Explain the recent project architecture

What is Custom Middleware? How you create a custom middleware for authentication? And how can we set the custom middleware to specific actions, not for all the requests?

What is the extension method? In which place have you used it in your application?

How do microservices communicate to each other? How do you identify the other service in microservices?

What is a service token?

Create a system design—schema for OrderSummary when you directly buy the product?

How, when multiple people order the same product, do you check the product availability stock?

What techniques need to be used?

In Angular, how did you pass the data from one component to another component?

I want to pass the data from one module to another, like users to facility, How you pass the data?

How do you call multiple api in parallel, and how do you customize the data when it received?

Scenario: What are the AI tools being used for development? What models are used for coding?

What are the other models available? What is the difference between them?

Scenario: You are unable to complete an assigned task within the expected timeline. How would you communicate this to your manager?

Scenario: During a code review, you identify improvements in a teammate's pull request, but they refuse to make the changes. How would you handle the situation? Would you approve the PR?

Scenario: When is your PR not approved by the approver? What you will do?

Date: 11/08/2026

Candidate: Dinesh R S

Interviewer: Arnold

Questions:

Recent Tech stacks and explanation.
AWS Pinpoint, SNS and SQS

Angular:

View Encapsulation - ShadowDom, Emulated, None
RouterOutlet
Reducer
Behaviour Subject vs Subject
Is Typescript sync and how it works
Shallow copy and use cases of spread operator
What is interceptor
What are the third party components used in your project

SQL:

How to find why StoredProcedure cause performance
Restrict a column of a table to have only positive values
Exception inside stored procedure
How to prevent Deadlock
How to one table based on another table
What is scoped identity
How Database deployment happens

.Net:

How to Authenticate and Authorize the JWT token
Inherited 2 interface with same method and param to base class then how to differentiate which one referring to?
Async vs await
How singleton works between cross browser

Date: 12-08-2026
Candidate: Dinesh
Interviewers: Saranya

Questions:

Explain the recent Tech stacks worked.

Why Deploy Angular in AWS S3 bucket

Scenario: Users can Order products. Design a database schema to capture the order history and select a statement for it?

What is a deadlock and how do you prevent it and what steps would you do after the deadlock happens?

What is the use of temptable inside SP

How data communicate between component happens

Observables vs promise

How does parallel api implementation happen in angular?

How data communicate on routing and if data is shared then how hide data in URL?

How to implement data streaming in Netflix?

Scenario: You are assigned to multiple projects. How would you determine priorities, manage your workload?

Scenario: You have multiple tasks to complete within a tight deadline, and you are allowed to use an AI coding assistant. Which AI coding agent would you choose, and how would you use it to improve productivity while maintaining code quality?

Scenario: You are unable to complete an assigned task within the expected timeline. How would you communicate this to your manager?

Scenario: During a code review, you identify improvements in a teammate's pull request, but they refuse to make the changes. How would you handle the situation? Would you approve the PR?

Date: 18/08/2026

Candidate: Kathir

Interviewer: Satheesh

.Net:

- 1) Can you elaborate on the underlying architecture of your project, including the core modules and technologies involved?
- 2) What mechanism do you use to centralize exception handling across your .NET Core application?
- 3) Can you walk me through the security architecture — specifically, how authentication and authorization are handled in your application?
- 4) Can you explain the purpose and use cases of Thread and Task in .NET?
- 5) Explain to me about design patterns used in recent projects?
- 6) Explain your logging strategy across a distributed microservices architecture?
- 7) What strategies do you follow for service-to-service communication?
- 8) What all are the best practices do you rely on for performance tuning and issue prevention in .NET applications?

AWS:

- 1) Could you walk me through your CI/CD deployment pipeline for AWS, and outline the key AWS services leveraged in your architecture?
- 2) What deployment strategy do you follow to push script changes to your AWS environment?
- 3) What load balancer is used in your projects? ALB (Application Load Balancer) vs NLB (Network Load Balancer)
- 4) Cloud Map/service discovery and how traffic is distributed across multiple containers?

SQL:

- 1) Explain the different transaction isolation levels in SQL Server and your strategy for choosing the appropriate one?
- 2) Use of Snapshot isolation?
- 3) Why do you use stored procedures in your projects?

Date: 19/08/2026

Candidate: Kathir

Interviewer: Saranya

.Net:

- 1) Could you walk me through a brief professional introduction, along with the key technologies and components involved in your projects?
- 2) What service registration strategy do you use for logging user activity and transactional data for SQL Server?
- 3) How do you handle service-to-service authentication between microservices, and what happens when the token expires mid-call?

AWS:

- 1) How do you deploy client-uploaded documents to an S3 bucket?
- 2) Did you use the S3 bucket to store file documents?

Angular:

- 1) Could you explain your approach to integrating APIs within an Angular application?

- 2) What design pattern is used to structure a service class and component class for API integration in Angular?
- 3) What approach do you use to share or transfer data between different modules in an Angular application?
- 4) How do you achieve secure, non-visible data transfer during navigation in Angular?
- 5) For API integration in Angular, do you prefer Promises or Observables — and what's the reasoning behind that choice?

SQL:

- 1) Design a relational database schema (with tables and relationships) to store and manage file upload document information.

General Question:

- 1) How many AI coding assistants have you used in recent projects, and which one do you prefer, and when?
- 2) If you foresee a delay in completing an assigned task, how would you proactively communicate this to your manager?
- 3) What best practices do you follow when prompting AI coding assistants to implement features in your projects?
- 4) How would you handle a code review disagreement where a teammate resists your suggested improvements — and would you still approve the PR?

Likewise MPX Team

Date: 3-03-2025

Candidate Name: Arvind Udayashankar

Interviewer: Sundar

Technical Questions:

General Questions

1. Project Overview – Explain your project's architecture, technologies, and responsibilities.
 2. Have you worked on a support project?
 3. Have you created a UI using .NET?
 4. What is your knowledge in MVC and ASP.NET & hands on experience in legacy app?
-

Database & SQL Questions

5. Exception handling in SQL Server stored procedures – Different ways to handle errors.
 6. How to find a stored procedure for a specific flow Without seeing the code?
 7. How to debug a stored procedure with 1000+ lines?
 8. What is a CTE? How does it compare to a temporary table?
 9. How do you handle performance issues in SQL queries?
 10. How do you point to the correct database when there are multiple databases?
-

Performance & Scalability

11. How will your application handle 1000 concurrent users?
 12. How do you troubleshoot application slowness and improve performance?
-

.NET & ADO.NET

13. What is ADO.NET?
 14. How do you handle exceptions in .NET? (Different ways)
 15. What is a base class? How and when do you use it?
-

DevOps & Deployment

16. What is the CI/CD deployment plan?
17. How would you host an application without Azure?
18. How do you write a YAML script for CI/CD?

Date: 04-03-2025

Candidate Name: Santhosh Kumar M

Interviewer: Satheesh Kuselan

Technical Questions: (Virtual)

- Tell me about yourself
- Explain recent projects and architecture used in that project
- Asp.net page life cycle
- What is postback events and how will they work?
- What is persistent cookies in Asp.net
- How do you maintain State in Asp.net
- How do you execute the Javascript from backend
- How do you debug JavaScript?
- Have you worked in a Support role before?
- How do you deploy the application Manually?
- What is an Application Pool in IIS?
- How to recycle or restart the application in IIS
- How you are maintaining Logs.
- What is Event Viewer?
- How do you find the Root Cause Analysis (RCA) if a request is not received by the API?
- When a client reported an issue, but you don't have access to the Production environment, How do you find the RCA for this issue.
- How do you implement JWT Authentication
- JWT Authentication and Authorization, Access token, Refresh token
- How would you design a database and API for the following scenario.
A school application where parents logged in to see student marks and details, and teachers logged in to view and edit student details..
- Can we run the Stored Procedure in Entity framework and how?
- Shared a stored procedure with more number of lines and asked to explain that line by line.
- How will you optimize the performance in stored procedure?
- What is Dependency Injection?
- Difference between Scoped, Transient, and Singleton DI lifetimes
- What is sealed class?
- Have you implemented Interface and abstract in your project?

- Explain Solid Principle with your real time project in which you implemented the principles.
- Have you worked in Angular?
- Have you worked in AWS?
- Have you worked in Lamba?

Additional Notes:

Client expecting hands-on experience in Asp.net, Manual Deployment(IIS), Authentication, Performance Optimization in SQL, Scenario based questions in Prod Issue.

Date: 07-03-2025

Candidate Name: Vijayakumar R

Interviewer: Satheesh Kuselan

General:

Manual application deployment in IIS.

IIS log information

When moving code from staging to production, what are all the things to consider?

Create a report for the current transaction for online payment.

use case of AJAX

Experience with AWS

Sticky session?

Load balancer?

C#:

Delegates

Interface & Abstract classes

Dependency Inversion principles

Design pattern used in project

What is Data Annotation?

Postman:

using postman for debugging the application

Angular:

Observable

operators

CSS:

How to debug if any CSS styles are not reflected on your page?

What is element selector

what is responsive design

MVC:

Difference between Scoped, Transient, and Singleton DI lifetimes

State management

Session and Cookie

Debug javascript in view page

ASP.NET:

what is postback

What is server transfer

what is querystring

handle Windows and WebForm Authentication

SQL:

Debug procedure

Query Performance tuning

Remove duplicate record

Index

Fetch all the records from tableA that are not available in RecordB.

Date : 07/03/2025

Candidate : Anbarasu Shanmugam

Interviewer : Kannan Pushparani

Questions:

1. Tell me about yourself
2. Explain about project
3. JWT token generation and expiration mechanism
4. Create index for varchar column
5. How to get data from different data source in SQL
6. How to load large data into Grid in front end
7. How to optimize the stored procedure
8. Types of ORM and which is best
9. How to handle transaction in Dapper
10. How to authorize specific user to your application resource

Date : 07/03/2025

Candidate : Aravindraj Gopal

Interviewer : Ram Vemuganty, Kannan Pushparani

Questions:

- 1) Tell me about your self
- 2) Tell me about last project details and roles and responsibility
- 3) Tell me about what are technical issue facing in last project
- 4) how to optimize SP
- 5) Limitation of Linq to SQL
- 6) cluster Index vs non-cluster Index
- 7) If you're facing performance issues with a single stored procedure, what process would you follow to address them?
- 8) how to handle transaction from entity framework side
- 9) propose of micro-services and advantage
- 10) how many database we should use in micro-service
- 11) explain about SOLID principle
- 12) advantage of DI
- 13) UnitOfWork
- 14) JWT and How did you go about adding the claims?

Date : 18/06/2025

Candidate : Muthusamy Nellaiappan

Interviewer : Ram Vemuganty, Kannan Pushparani

Questions:

Tell me about your self
Tell me about last project details and roles and responsibility
JWT token authentication
Difference between SOAP and REST
what is your approach to save large dataset(1000 records) in Gridview from front end to back end
Repository code pattern
Do you know about Environment Variables
Explain Entity framework

How to debug the complex stored procedure and try to fix the issue without having production environment access

Explain about concurrency

SOLID principle implementation in your project

Explained about Singleton

Date: 20/06/2025

Candidate Name: Mohan Chinnathambi

Interviewer: Ram Vemuganthu, Kannan Pushparani

Questions:

- 1) Self introduction**
- 2) Can you explain your most recent project and the technology stack you used?**
- 3) What steps will you take if a new requirement needs to be developed?**
- 4) How do you pass data to an API? (e.g., through parameters, request body, headers)**
- 5) What are the best practices to improve API performance?**
- 6) How does your application manage user authentication and authorization?**
- 7) What is a JWT and what information does it contain?**
- 8) If a specific method is causing frequent errors and performance issues, how would you identify and resolve the problem?**
- 9) If you're given a tight deadline to complete work in a week, how will you manage your tasks?**
- 10) How would you manage your time and priorities if asked to support additional urgent projects?**
- 11) You mentioned reverse logistics in your project. Can you explain what it means?**

Date : 1/07/2025

Candidate : Gangeswar Pratheep

Interviewer : Gobinath Rajendiran, Sriram Ravisankar

Questions:

Node.js

1. Self introduction
2. How is Node.js different from other backend technologies?
3. Can we build an e-commerce application using Node.js?
4. What is a single-threaded architecture in Node.js?
5. Explain Express middleware with a real-time example.
6. What is JWT and how do authentication and authorization work?

Node.js Problem Statement:

```
function test() {  
  setTimeout(() => {  
    return 'Hello Candidate';  
  }, 6000);  
}  
function main() {  
  console.log(test() + ' Welcome to Likewize');  
}  
  
main();
```

React.js

1. How do you communicate between Figma and your React (or Angular) application?
2. Explain the React lifecycle (React 18).
3. Detailed usage of `useEffect`
4. `useCallback` vs `useMemo` – when and why to use each?

React.js Problem Statement:

Use Case Requirement:

```
/*  
1. User can search an integer – e.g., 7 or 40.  
2. On clicking "Search", call the GET API:  
`https://api.restful-api.dev/objects/${id}`.  
3. Pass the search value as the `id` parameter.  
4. Use Axios or `fetch` to make the request. Use try-catch to handle  
errors.
```

5. If the result is found, display: name, year, price, and model.
 6. If not found, show the message: "No results found".
- */

AWS Lambda:

1. Would you prefer a Lambda function for file upload operations lasting more than 15 minutes?

General Questions:

1. Have you used an ORM like Sequelize?
2. Have you worked with any Relational Databases like MySQL or MSSQL?
3. Do you have experience creating Stored Procedures, Functions, and Triggers?
4. Do you have experience working with NoSQL databases (e.g., MongoDB, DynamoDB)?

Date : 29/07/2025

Candidate : Aishwarya D

Interviewer : Ram Vemuganty, Satheesh Guselan

Question

**1. Given a stored procedure and asked to explain line by line
USE MobilePhoneXchange;**

GO

ALTER PROCEDURE UpdateSwitchUpEligibility

@HandsetQuoteId INT

AS

BEGIN

DECLARE @AgreedValue INT;

DECLARE @QuoteValue INT;

```

DECLARE @QuotePhoneAuditId INT;

DECLARE @InspectionPhoneAuditId INT;

SELECT @AgreedValue = AgreedValue, @QuoteValue = QuoteValue,

    @QuotePhoneAuditId = QuotePhoneAuditId, @InspectionPhoneAuditId =
InspectionPhoneAuditId

FROM t_HandsetQuote

WHERE HandsetQuoteld = @HandsetQuoteld;

IF @AgreedValue IS NOT NULL AND @QuoteValue IS NOT NULL

BEGIN

    IF @AgreedValue = @QuoteValue

    BEGIN

        EXEC
mpx2_t_HandsetQuoteAdditionalInfo_InsertUpdateAdjustmentAdditionalInfo
@HandsetQuoteld, 'SwitchUpEligible', 'Yes'

    END

    ELSE IF @AgreedValue <> @QuoteValue

    BEGIN

        DECLARE @QuotePhoneModelId INT;

        DECLARE @InspectionPhoneModelId INT;

        DECLARE @QuoteMasterPhoneModelId INT;

        DECLARE @InspectionMasterPhoneModelId INT;

        SELECT @QuotePhoneModelId = PhoneModelId

        FROM t_PhoneAudit

```

WHERE PhoneAuditId = @QuotePhoneAuditId;

SELECT @InspectionPhoneModelId = PhoneModelId

FROM t_PhoneAudit

WHERE PhoneAuditId = @InspectionPhoneAuditId;

SELECT @QuoteMasterPhoneModelId = MasterPhoneModelId

FROM t_PhoneModel

WHERE PhoneModelId = @QuotePhoneModelId

SELECT @InspectionMasterPhoneModelId = MasterPhoneModelId

FROM t_PhoneModel

WHERE PhoneModelId = @InspectionPhoneModelId

IF @QuoteMasterPhoneModelId <> @InspectionMasterPhoneModelId

```

```
EXEC
mpx2_t_HandsetQuoteAdditionalInfo_InsertUpdateAdjustmentAdditionalInfo
@HandsetQuoteId, 'SwitchUpEligible', 'Yes';
```

```
END
```

```
END
```

```
END
```

```
END
```

```
END
```

2. Ask to write Query to find the second largest values in the table

3. What is CROSS JOIN

4. What are indexes? Where to use Indexes?

5. Difference between Primary Clustered and Clustered Index

6. What is Primary key

7. How will you do SQL Optimisation and its techniques

8. Difference between Function and Stored procedure

9. Explain in detail about JWT Token

10. How you will Ensure if the payload part of the JWT is Tampered?

11. How will ensure if the Access token is Expired ?

12. Explain about the Middleware in practical manner (ie. middleware that we have worked on)

13. What is Dependency Injection, in practical explanation?

14. What is Partial view?

15. What is responsive css?

16. What are Pseudo css?

14. Define Abstraction in a practical way?

15. Define Interface and the practical use of it?

16. What are sealed classes?

17. How will you debug in Javascript and JQuery?

- 18.Explain about logging
- 19.Explain about manual deployment?
- 20.What is iisreset?
- 21.What is Application pool?
- 22.What happens when do iisreset?
- 24.Explain State Management techniques and handson experience about it
- [25.](#) If you want run an job or task 10 mins once how will you do that?

Date : 01/08/2025

Candidate : Parthiban

Interviewer : Ram Vemuganty, Kannan Pushparani

Question:

1. Have you worked on API versioning?
2. Do we have Data annotation concept in API?
3. How did you communicate with External API in your project?
4. How to handle FromForm value in your code?
5. How to verify JWT token is valid or not?
6. Have you used any other authentication except JWT for authentication?
7. Difference between Singleton and static?
8. Tell me interfaces used in scenarios in your project?
9. Sealed class?
10. Rate yourself in SQL out of 10
11. Explain about your project?
12. What do you prefer, Entity framework or [ADO.Net](#) for your project and why?
